## PREFACE

This list of research publications produced or sponsored by the Economic Research Service, U.S. Department of Agriculture, is designed as a source of reference for the published materials of the Service during the first 5 years of its activities. It includes citations for four of the five domestic ERS research divisions. The Marketing Economics Division publications are not included, since that division recently revised its bibliography, ERS-205. Publications of the Foreign Development and Trade and Foreign Regional Analysis Divisions for the same period are reported in ERS-Foreign 167, August 1966.

The list is intended to include citations for all published material of more than temporary interest regardless of the form in which published or the current availability. Important among these are publications in Department and Economic Research Service series, periodic reports, and articles in periodicals of the Department and State Experiment Station bulletins, which report results of State-Federal cooperative studies in agricultural economics. Articles in technical and professional journals, both within and outside the Department, are cited as well as proceedings of symposia and conferences which report important ERS research results. Also included are reports of research performed under contract or cooperative agreements.

Papers, speeches, articles in nontechnical journals and other news, informational or extension items generally have been excluded as not being of continuing importance. A few such reports have been included if, at the time of release, they presented significant initial research results or findings not available elsewhere.

In this list, publications are grouped by subject-matter areas and by ERS divisions responsible for research in such areas. The special sequential bibliographical card technique which was used provides a permanent deck of cards that will be available for many important uses. Cards can be punched for classification and sorting into any desired category. Special publication lists for specific problem areas can thus be prepared quickly and at minimum cost. Additions and deletions to the deck can be handled readily, facilitating the maintenance of current publication lists.

Citation of publications provides no indication that copies are available. Generally, reference copies can be found in libraries. Publications from State Experiment Stations can usually be obtained from issuing stations. Some items produced by nonpublic agencies are available from the publishers. Most ERS publications issued within the past 2 or 3 years, can be obtained from the Division of Information, Office of Management Services, U.S. Department of Agriculture, Washington, D. C. 20250. Photoreproductions of material in its collection may be purchased from the National Agricultural Library, Photocopy Section, Washington, D. C. 20250.
